

SAFE MEANS "FREE FROM HARM"

VACCINE SCHEDULE IS INCREASING

VACCINATION Killed My Baby

It's time to question what you have been told!

- USA Govt. Vaccine Injury Compensation fund has paid out over AUD\$4.5 billion - for many vaccine deaths and injuries, including autism;
- most whooping cough bacteria is carried in the fully vaccinated; and can stay in the back of the throat for up to 28 days and spread to others.
- herd immunity only occurs after naturally catching the disease;
- most diseases were down 90% before any vaccines;
- all vaccination units have resuscitation equipment ready, due to the children having anaphylactic responses immediately after vaccinations;
- spontaneous miscarriage after vaccinating pregnant women has increased dramatically;
- parental rights are being taken away;
- doctors questioning vaccine safety and efficiency are silenced;
- vaccine injuries are being fobbed off as coincidence or normal.

MOST ANTIVAX PEOPLE USED TO BE PROVAX

The World Health Organisation admits there are approximately 159 NEW vaccines in various trial stages for the childhood schedule. There is also an adult schedule with 102 new vaccines being prepared. All vaccines have side effects. Some ingredients are carcinogenic e.g. formaldehyde and Polysorbate 80 – little wonder childhood cancers are the leading cause of DEATHS now, in Australian children.

Please do your research and don't succumb to fear and bullying tactics from the government, media or the medical profession. Drug companies are funding the media, governments and medical schools, all of these have vested interests. We only vaccinate for approx. 3% of all known diseases and these are the ones the government wants us to be scared of. When will the schedule stop growing?

Vaccination is NOT COMPULSORY in Australia – medical decisions need to remain a personal and or parent's responsibility. Children are sicker than ever - there is more allergies, asthma, cancer, ear infections, eczema, juvenile arthritis, juvenile diabetes, SIDS, autism, seizures, ADD, ADHD, and many other conditions that were previously rare. So ... are we replacing measles with these more serious lifelong conditions?

EVERY MEDICAL PROCEDURE MUST BE OUR CHOICE

This mother thought she was doing the 'right' thing so she vaccinated her son, twice. He reacted badly both times, on the same day as the injections. The doctor said that was 'normal', when in fact it is not normal but, common.

Deaths from vaccines are being hidden from the public, they are called SIDS or/other new medical terms. Vaccine deaths in Australia are no longer acknowledged for fear people will stop vaccinating. Doctors and medical staff are restricted in what they can say, their careers are also at risk.

When a baby dies from vaccines it is often called SIDS or a coincidence. Acknowledged risks, side effects and adverse reactions are listed on the PRACTITIONER VERSION of the vaccine product insert. These risks increase as the vaccine schedule expands and adds to the toxic load of the child.

Is the HPV vaccine causing infertility?

Doctors and medical staff are restricted in what they can say about vaccine safety, their careers are also at risk.

"This vaccine is marketed to prevent cervical cancer, however, there is NO scientific evidence that HPV causes cervical cancer."

- this vaccine is the most dangerous ever according to U.S.A. adverse events reporting;
- in USA 324 teenagers have reportedly died from this vaccine;
- 9,686 US cases where the vaccine recipient did not recover from the admitted adverse reactions;
- parents' in Australia are told their child's adverse reaction is 'a coincidence', and no support given;
- teenage pregnancy rates are dropping dramatically since this vaccine was rolled out. Many are now infertile and will never bear babies.
- **Ingredients include: Polysorbate 80 (known carcinogen) and aluminium (linked to Alzheimers).**

Is the Flu Vaccine killing our elderly?

Just like people with viral infections can shed and transmit wild-type virus, people given live virus vaccines can shed and transmit vaccine strain live attenuated virus.

The Flu vaccine:

- is notoriously ineffective
- may be the cause of many elderly people dying soon after being vaccinated;
- is a live virus vaccine, which means it can shed and therefore spread the disease to others;
- is now given to babies yearly (from 6mths - 18yrs);
- often contains traces of mercury (which is not listed on insert);
- being given to pregnant women although NONE have been tested for safety during pregnancy; *Since doctors have been recommending vaccines for pregnant women, the spontaneous miscarriage rates have skyrocketed.*
- may be contributing to the sharp increase in Alzheimer's disease.

Please make sure you do your homework to protect your family and/or your unborn baby.

Excessive vaccination during brain development may promote autism spectrum disorders Medical Veritas 2008

HERD IMMUNITY FROM VACCINES IS UNPROVEN!

DO VACCINES CAUSE AUTISM?

Autism and vaccines:

- Autism is now an epidemic affecting over 230,000 Australians and the rate is increasing 20-40% yearly;
- many autistic people remain non-verbal and in nappies into adulthood;
- USA vaccine injury compensation has now paid families for vaccine induced autism;
- in USA the rate of autism is now 1 in 25 children and Australia is not far behind;
- prior to vaccines the autism rate was 1 in 10,000.

Dr William Thompson, a CDC scientist has NOW admitted his team committed fraud by altering the outcome of their study into the MMR vaccine causing autism. What was published was not truthful. He has admitted the study did in fact show autism is being caused by at least the MMR vaccine. See the documentary called "VAXXED from cover-up to catastrophe" on youtube.

OUR CHILDREN ARE SICKER THAN EVER BEFORE
